

## “People's E-Coat” system (the e-coat line for everybody)

We created a compact e-coat paint line system, which features high quality and a favorable price, but nevertheless complies with industrial standards.

This painting system is particularly interesting for:

- Powder-coating operations that require strong corrosion protection underneath the powdercoat
- Electroplating companies that want to enter into organic coating (duplex)
- Operators who want to get started with e-coat technology
- Suppliers who want to carry out e-coat coatings in their company
- all job-coaters in general

**Useable dimensions of the standardized system: 2000 x 1500 x 600 mm**

Cycle frequency: 8-10 min. per cycle (depending on the length of pre-treatment)  
Capacity: up to 15 sqm per rack

Today, 4 variants are available (depending on the length of pre-treatment)

- 3-zone pre-treatment; minimal equipment (e.g. for iron phosphating)
- 4-zone pre-treatment; like above, but with improved rinsing performance
- 5-zone pre-treatment; good pre-treatment for innovative processes (e.g. Bonderite, Oxsilan, etc.)
- 6-zone pre-treatment; excellent VBH (e.g. TecTalis, comparable with zinc phosphating)

Prices on request!

We will send you a detailed description of the system with dimensions as well as an offer.
